

# Peak Visualization Fifth Iteration

Tyler Newlin, Connor Pflederer,  
Dan Chepkwony, Cody Lockridge

# Client Information

Alicia Mckoy - Peak Mind  
- [alicia@joinpeakmind.com](mailto:alicia@joinpeakmind.com)

# Mentor Feedback

- Beginning/Mid Iteration
  - Ways to represent different permission levels within our backend.
    - We ended up still using a single table for users.
  - Look into React useReducer hook to make the state management more manageable in the frontend.
- Before Client Meeting
  - We mostly talked about ways to make the handoff process easier with the client.

# Client Feedback

- Showed us how user information could have been more similar to their existing platform.
  - Talked about basically wanting them to be transferable to and from their current platform.
- There was a little bit too much navigation to get to the different parts of the administration pages.

# Client Software Use

- Some initial confusion of where things were found, but she was able to learn quickly.

# Multi-Tier User System

- Administration pages that allow the creation of Organizations for client business along with managing and creating users within said organization
- Management pages for people within client businesses that allows them to view datasets for the different people within their organization.

# Benefits to Client

- Peak Mind now have the ability to create groups of users for an organization they are working with without requiring them the users to sign up themselves.
  - This system is based on the system they have for their current platform for when they first start working with another company.
- Peak Mind employees can download and view datasets without having to directly interact with the AWS management console.
- Select people within organizations are now able to see the results of the labs their peers/employees participate in.

**Connor Pflederer** 11:48 PM

It's over!!!

2

Guys we dont have a funny page wtf 😞  
slide  
in our presentation  
is that actually required for points lmao

**Tyler Newlin** 11:49 PM

oh yeah

ummmmmm
